

CSS Text Alignment

[< Previous](#)[Next >](#)

Text Alignment

The `text-align` property is used to set the horizontal alignment of a text.

A text can be left or right aligned, centered, or justified.

The following example shows center aligned, and left and right aligned text (left alignment is default if text direction is left-to-right, and right alignment is default if text direction is right-to-left):

Example

```
h1 {  
  text-align: center;  
}  
  
h2 {  
  text-align: left;  
}  
  
h3 {  
  text-align: right;  
}
```

Try it Yourself »

When the `text-align` property is set to "justify", each line is stretched so that every line has equal width, and the left and right margins are straight (like in magazines and newspapers):

Example

```
div {  
  text-align: justify;  
}
```

Try it Yourself »

Text Direction

The `direction` and `unicode-bidi` properties can be used to change the text direction of an element:

Example

```
p {  
  direction: rtl;  
  unicode-bidi: bidi-override;  
}
```

Try it Yourself »

Vertical Alignment

The `vertical-align` property sets the vertical alignment of an element.

This example demonstrates how to set the vertical alignment of an image in a text:

Example

```
img.top {  
  vertical-align: top;  
}  
  
img.middle {  
  vertical-align: middle;  
}  
  
img.bottom {  
  vertical-align: bottom;  
}
```
