

CSS Text

[< Previous](#)[Next >](#)

TEXT FORMATTING

This text is styled with some of the text formatting properties. The heading uses the text-align, text-transform, and color properties. The paragraph is indented, aligned, and the space between characters is specified. The underline is removed from this colored ["Try it Yourself"](#) link.

[Try it Yourself »](#)

Text Color

The **color** property is used to set the color of the text. The color is specified by:

- a color name - like "red"
- a HEX value - like "#ff0000"
- an RGB value - like "rgb(255,0,0)"

Look at [CSS Color Values](#) for a complete list of possible color values.

The default text color for a page is defined in the body selector.

```
body {  
  color: blue;  
}  
  
h1 {  
  color: green;  
}
```

Try it Yourself »

Note: For W3C compliant CSS: If you define the `color` property, you must also define the `background-color`.

Text Color and Background Color

In this example, we define both the `background-color` property and the `color` property:

Example

```
body {  
  background-color: lightgrey;  
  color: blue;  
}  
  
h1 {  
  background-color: black;  
  color: white;  
}
```
