

CSS Tables

[< Previous](#)[Next >](#)

The look of an HTML table can be greatly improved with CSS:

Company	Contact	Country
Alfreds Futterkiste	Maria Anders	Germany
Berglunds snabbköp	Christina Berglund	Sweden
Centro comercial Moctezuma	Francisco Chang	Mexico
Ernst Handel	Roland Mendel	Austria
Island Trading	Helen Bennett	UK
Königlich Essen	Philip Cramer	Germany
Laughing Bacchus Winecellars	Yoshi Tannamuri	Canada
Magazzini Alimentari Riuniti	Giovanni Rovelli	Italy

[Try it Yourself »](#)

Table Borders

The example below specifies a black border for `<table>`, `<th>`, and `<td>` elements:

Firstname	Lastname
Peter	Griffin
Lois	Griffin

Example

```
table, th, td {  
  border: 1px solid black;  
}
```

Try it Yourself »

Notice that the table in the example above has double borders. This is because both the table and the `<th>` and `<td>` elements have separate borders.

Collapse Table Borders

The `border-collapse` property sets whether the table borders should be collapsed into a single border:

Firstname	Lastname
Peter	Griffin
Lois	Griffin

Example

```
table {  
  border-collapse: collapse;  
}
```

}

[Try it Yourself »](#)

If you only want a border around the table, only specify the **border** property for `<table>`:

Firstname Lastname	
Peter	Griffin
Lois	Griffin

Example

```
table {  
  border: 1px solid black;  
}
```

[Try it Yourself »](#)

Table Width and Height

Width and height of a table are defined by the **width** and **height** properties.

The example below sets the width of the table to 100%, and the height of the `<th>` elements to 50px:

Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
table {  
  width: 100%;  
}  
  
th {  
  height: 50px;  
}
```

Try it Yourself »

Horizontal Alignment

The `text-align` property sets the horizontal alignment (like left, right, or center) of the content in `<th>` or `<td>`.

By default, the content of `<th>` elements are center-aligned and the content of `<td>` elements are left-aligned.

The following example left-aligns the text in `<th>` elements:

Firstname	Lastname	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
}
```

[Try it Yourself »](#)

Vertical Alignment

The `vertical-align` property sets the vertical alignment (like top, bottom, or middle) of the content in `<th>` or `<td>`.

By default, the vertical alignment of the content in a table is middle (for both `<th>` and `<td>` elements).

The following example sets the vertical text alignment to bottom for `<td>` elements:

Firstname	Lastname	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
td {  
  height: 50px;  
  vertical-align: bottom;  
}
```

[Try it Yourself »](#)

To control the space between the border and the content in a table, use the **padding** property on `<td>` and `<th>` elements:

Firstname	Lastname	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
th, td {  
  padding: 15px;  
  text-align: left;  
}
```

Try it Yourself »

Horizontal Dividers

First Name	Last Name	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Add the **border-bottom** property to `<th>` and `<td>` for horizontal dividers:

```
th, td {  
  border-bottom: 1px solid #ddd;  
}
```

[Try it Yourself »](#)

Hoverable Table

Use the `:hover` selector on `<tr>` to highlight table rows on mouse over:

First Name	Last Name	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
tr:hover {background-color: #f5f5f5;}
```

[Try it Yourself »](#)

Striped Tables

First Name	Last Name	Savings
Peter	Griffin	\$100

Joe

Swanson

\$300

For zebra-striped tables, use the `nth-child()` selector and add a `background-color` to all even (or odd) table rows:

Example

```
tr:nth-child(even) {background-color: #f2f2f2;}
```

[Try it Yourself »](#)

Table Color

The example below specifies the background color and text color of `<th>` elements:

First Name	Last Name	Savings
Peter	Griffin	\$100
Lois	Griffin	\$150
Joe	Swanson	\$300

Example

```
th {  
  background-color: #4CAF50;  
  color: white;  
}
```

[Try it Yourself »](#)

Responsive Table

A responsive table will display a horizontal scroll bar if the screen is too small to display the full content:

First Name	Last Name	Points	Points	Points	Points	Points	Points	Points	Points
Jill	Smith	50	50	50	50	50	50	50	50
Eve	Jackson	94	94	94	94	94	94	94	94
Adam	Johnson	67	67	67	67	67	67	67	67

Add a container element (like `<div>`) with `overflow-x:auto` around the `<table>` element to make it responsive:

Example

```
<div style="overflow-x:auto;">

<table>
... table content ...
</table>

</div>
```

Try it Yourself »

Note: In OS X Lion (on Mac), scrollbars are hidden by default and only shown when being used (even though "overflow:scroll" is set).

More Examples

Set the position of the table caption

This example demonstrates how to position the table caption.

CSS Table Properties

Property	Description
<u>border</u>	Sets all the border properties in one declaration
<u>border-collapse</u>	Specifies whether or not table borders should be collapsed
<u>border-spacing</u>	Specifies the distance between the borders of adjacent cells
<u>caption-side</u>	Specifies the placement of a table caption
<u>empty-cells</u>	Specifies whether or not to display borders and background on empty cells in a table
<u>table-layout</u>	Sets the layout algorithm to be used for a table
